

The Rollerstop Philosophy

We want our products to help advance micromobility in urban areas. That's what we believe in, and what we work for! **ROLLERSTOP stands for a brilliantly simple scooter parking system.** By its very nature, the scooter stand supports an environmentally friendly mode of transport – so its production should not create any unnecessary burden on the environment.

Rollerstop is Made in Austria – developed, designed and sustainably manufactured in Austria and the EU. Our products are durable and maintenance-free. Should disassembly and disposal ever become necessary, the base material can be recycled. Thanks to the modular system, installations can be extended without ever having to dispose of existing parts.

SECURE SCOOTER PARKING.

ROLLERSTOP – the lockable parking system for all common kick scooters and e-scooters.

www.rollerstop.com

RS Series

The RS Series fits **all compact kick scooters, mini scooters and kickboards** and can be extended with additional parking spaces at any time. All RS Series models feature a rotating locking bar, so they can easily be secured with a standard padlock.

eS Series

The eS Series was **developed specifically for e-scooters**. Because of their built-in batteries, wider handlebars and bulkier tyres, electrically powered scooters typically need more space in the stand.

That said, **slimmer, classic kick scooters can of course also be parked and locked using the eS Series**. If you want to cover both kick scooters and e-scooters with a single system, the eS Series is the right product for you.

Home Use

Order meets your home. The eS1 is the clever solution for anyone who wants to keep their **kick scooter safe, tidy and stylishly parked at home** too. Whether in the garage, against the house wall or in the driveway – our new eS1 fits seamlessly into any setting.

Thanks to its classic, proven design, the scooter can not only be **parked to save space**, but also **locked securely**. That way, everything stays right where it belongs.

Bicycle Racks

Rollerstop's range also includes a **wide variety of bicycle parking systems**. Secure micromobility – complete solutions from a single source! From simple hoops to eye-catching, playful designs – let us advise you and find the perfect bike rack for your individual needs and setting!
